Instrument reprocessing: Soiled zone

Getinge's designs are based on the barrier principle, ensuring clear separation of soiled, clean and sterile zones. The zones are separated by pass-through washer-disinfectors and sterilizers. The following pages will describe what accessories we offer for each of the zones, starting with the soiled zone.

Unclean items from the operating theaters, wards, outpatient and other departments arrive at the reception area – for soiled goods by covered trolleys or by lift – in the same instrument trays, baskets and containers as they were delivered in. After visual inspection, items are either put straight on racks and loaded into the pass-through washer-disinfectors or manually cleaned by soaking, spray-gun rinse and/or ultrasonic cleaning, and then put into the washer-disinfector.
