Технические характеристики на канюли HLS, комплекты для подкожного введения PIK компании GETINGE

Smooth transition between introducer and cannula tip

Stop ring defines maximum insertion depth

HLS Cannulae

Trusted vessel access

The HLS Cannulae are indicated for cannulation of all suitable vessels (e.g. femoral vessels) and can be inserted percutaneously, using the Seldinger technique, or under visual control into the previously exposed vessel.

An excellent flow performance, a wide range of cannulae sizes and different coating options make it one of the most popular peripheral cannulae - the perfect choice for vessel access during extracorporeal circulation.

Performance characteristics:

- Thin cannula walls support an excellent pressure/flow performance
- Reinforced side holes help reduce the risk of kinking
- Versions with Bioline Coating for extended respiratory and / or circulatory support
- Duration of use from 6 hours up to 30 days*

Easy to use:

- Locking mechanism keeps introducer in position during insertion
- Smooth transition from introducer to cannula to support a safe cannula insertion
- Depth marks to control insertion depth, a stop ring to define maximum insertion depth
- Selectively hardened proximal cannula body, reduces the risk of kinking after insertion

A pair of side holes on every arterial tip

Multiple drainage openings on every venous cannula

Pressure drop for all arterial HLS Cannulae 3/8"

Pressure drop for all venous HLS Cannulae 3/8"
